(54) Title: SYSTEM AND METHOD FOR BUILDING USER PROFILES

(57) Abstract

A computer apparatus and a method are described for establishing a global interest profile of a user. At least one local server and an enterprise server communicate with the user via a communication channel. The local server assigns a local ID to the user. The enterprise server assigns to the user a global ID and links the local ID and local user information with the global ID to form a global interest profile of the user. The identity of the users is not shared between servers, thereby maintaining the privacy of the user. Also described is a method for forming and updating user profiles that operates incrementally and in real time.
